RE claims 1, none of the prior art of record disclose of selecting a first data sample and a second data sample in the first audio file; calculating an average output value of the first two data samples in the first audio file; if the average value in the first audio file exceeds a threshold value, marking the second data sample as an effective start position associated with the first audio file and marking the first data sample as silent; if the average value does not exceed the threshold value: and selecting subsequent data samples in the first audio file and updating the average value of all selected data samples until the average value exceeds a threshold value and selecting the last two data samples in the first audio file; calculating an average value of the last two data samples in the first audio file; if the average value exceeds a threshold value, marking the second data sample as an effective start of fade-out position-associated with the first audio file and marking the first data sample as silent; if the average value does not exceed the threshold value: and selecting subsequent data samples in the first audio file and updating the average value of all selected data samples until the average value exceeds a threshold value and selecting the first two data samples in the second audio file; calculating an average value of the first two data samples in the second audio file; if the average value exceeds a threshold value, marking the second data sample as an effective start position associated with the second audio file and marking the first

data sample as silent and if the average value does not exceed the threshold value:  
selecting subsequent data samples in the second audio file and updating the average  
value of all selected data samples until the average value exceeds a threshold value.

Similarly independent claims 7, 25, 28-29, 34-37 have been allowed for same  
reasons as in claim 1.

Re claim 8 has been analyzed and allowed since none of the prior art of record disclose  
of the specific wherein calculating an average value of the first two data samples in the  
audio file; if the average value exceeds a threshold value, marking the second data  
sample as an effective start position associated with the audio file and marking the first  
data sample as silent; if the average value does not exceed the threshold value and  
selecting subsequent data samples in the audio file and updating the average value of  
all selected data samples until the average value exceeds a threshold value and  
marking a current data sample as an effective start position associated with the audio  
file; and marking previously selected data samples as silent.
